

Safeglass®

Market Leader in Break Glass Technology.

The new, innovative plastic material designed to mimic glass but breaks into harmless pieces that do not cause injury.

Have you ever had to break glass?

Fortunately, most of us will never be in a situation where we have to break the glass to set off an alarm or reach emergency equipment. But have you ever thought about what would happen if you did? The chances are - you would cut yourself.

Safeglass® is the new polymer based material designed to mimic glass but break into harmless pieces that do not cause injury.

The material has been awarded Millennium Product status as well as winning the Scottish Innovation John Logie Baird Award in 1998.

Safeglass® is currently used in emergency break-glass applications on trains, in fire alarms, in shut-off valves and door bolts.

A new range of safe glassware and bottle-ware is being developed.

5 facts about Safeglass®:

- Breaks into harmless pieces
- Strength is controlled
- Can be made into almost any shape
- Makes 'glass' safe
- Can be any colour

Customer Expectations

Your staff and customers expect you to provide them with equipment which is safe to use. Since the use of glass is clearly dangerous, their needs are not being addressed. In extreme cases, injury caused by broken glass could lead to litigation. This can be avoided by using Safeglass®.

Safeglass® vs Real Glass

Traditionally, real glass is used in break-glass applications. Glass cuts! Safeglass® overcomes this problem because it is designed not to cause injury when it is broken. Safeglass® can also be produced in a range of strengths making it suitable for a number of different applications.

Malicious or accidental damage

Glass can be broken through accident or malice - the debris can be very dangerous. This is why we are developing a range of safe glassware and bottle-ware.
