

## Research and Development

We develop solutions for clients. We are currently working on the following Safeglass® applications:

- An emergency door bolt
- A new way to bottle beer and other liquids using Safeglass®
- A range of Safeglass® glassware
- An emergency window exit system on trains
- The middle layer of triple-glazed glass units
- A strong material that can be weakened on demand and made frangible suitable for glazing and emergency escape simultaneously.

The main features of Safeglass are:

- Breaking strength is controllable
- Can be produced clear or opaque
- Different grades available
- Safeglass® can be made into almost any shape

If you have a product that could incorporate the Safeglass® material, please contact us and we will be happy to discuss it.
